## Unzer modular

Author: [@Genuineq](https://twitter.com/Genuineq) [office@genuineq.com](mailto:office@genuineq.com)

Version 1.0 20/08/2020

## Payment module for osCommerce

Accept payments using Unzer payment service provider : [https:// unzerdirect.com](https://unzerdirect.com)

- A payment module for osCommerce that passes the customer directly from osCommerce checkout to a Unzer payment window.
- Successful payments are passed back to the osCommerce checkout on completion
- Unzer callbacks are also handled so that a successful payment is always recorded in osCommerce even if the customer's connection drops
- A payment link is recorded in osCommerce admin that can be sent to the customer to complete the payment at a later time
- Capture can be automated or performed manually from admin (eg. when stock availability has been confirmed)
- Partial and complete refunds may be performed from within admin
- Installs with limited simple changes (to only 2 files)

## Compatibility

Unzer API version 10

Compatibility has been tested with osCommerce Phoenix v1.0.7.7.

## Installation

- Step 0: always make sure you have an up-to-date backup of your store database and code before installing an addon.
- Step 1: if necessary, prepare your store by creating the admin orders "hook":
  - For stores needing modification:
    - Look in the folder docs/v1077. There are some additional files and these changed files:
      - admin/includes/classes/order.php
      - admin/orders.php
    - If you have not changed any of these files for another addon you can copy all the supplied files to your store folder
    - If you have changed them, use a diff (differences) tool to merge them. If doing this manually.
- Step 2: copy the payment module and hook files to your store

osCommerce services: shop rescue, addons to order, customization, migration from older versions, github help, integration with stock & accounting systems, eBay etc – contact [office@genuineq.com](mailto:office@genuineq.com)

- Step 3: install and enable the modules
  - Box module on shop with accepted cards: in administration / modules / boxes, install enable and position the box
  - Payment module: in administration / modules / payment install the unzer module and copy the settings from your unzer account.

## Help & support

Free help and support with installing and using the addon is available via the support thread on osCommerce forums: <https://forums.oscommerce.com/topic/412146-unzer-payment-modulefor-23/>

If you would like it installing for you, or customizing, or adapting for an earlier version of osCommerce, contact us via [office@genuineq.com](mailto:office@genuineq.com)
